

MULTI-FORMAT SCALER SWITCH WITH HDBT™ OUTPUT

SC-12BT

The Model SC-12BT is a 12 input HD Scaler that accommodates 4 HDMI, 4 VGA, and 4 AV inputs.

Select any of the inputs by using front panel push-buttons, RS-232 or IP commands. The Selected source is scaled to a fixed user-settable resolution and simultaneously output in 3 convenient formats: VGA, HDMI, and HDBaseT (for easy extension to 70m / 230 ft on a single UTP).

The SC-12BT provides comprehensive audio capabilities as well. HDMI audio is extracted; VGA and AV inputs (Composite, S-Video, and YPbPr) have their own separate audio inputs. Two auxiliary audio inputs are provided (balanced mic and stereo line-level).

Separate audio controls are provided on the front panel (for selected video and for Aux input). The overall audio is embedded in the HDMI and HDBaseT outputs and also available on RCA jacks. The unit also boasts a 20 watt audio amplifier for direct connection to 4 or 8 Ω speakers.

FEATURES

- 12 input Switcher
- 4x HDMI, 4xVGA, 2x CV, 1x S-Video, 1x YPbPr
- 3 Simultaneously Active Outputs
- VGA, HDMI, and HDBaseT™
