

Drywall Installation Brackets / Mud Rings

Many of the -E versions of the wall plate (-WP) or Decora™ plate (-DP) products include a retrofit Mounting Bracket also referred to as “Mud Ring”. The -E products are primarily for export where the wall plate sizes may not be the same as in the United States, so providing the mud ring makes installation very easy.

The mud rings are for low voltage applications (all of the -WP and -DP products qualify as low voltage), and since they are designed for retrofit application, they do not need to be anchored to studs. All the customer has to do is to cut a rectangular hole in the drywall.

KEY FEATURES

- Installs without attaching to a stud for maximum placement flexibility
- Offered in a variety of sizes
- Brackets adjust to fit various wall board thicknesses
- Bracket is its own template for cut out
